

Le Tran Hoang Son

Senior Android Engineer (Fintech / Banking, Enterprise)

Ho Chi Minh City, Vietnam | Phone: 0964131660 | Email: hoangson.shawn@gmail.com | Portfolio: [codemyday.vercel.app](#)

SUMMARY

Senior Android Engineer experienced in building and maintaining production-grade fintech/banking and enterprise mobile applications. Strong in Clean Architecture/MVVM, Jetpack Compose, and Design Systems (component library, guidelines, and testing). Comfortable owning features end-to-end, acting as a primary reviewer, and improving delivery quality through automation and reliable engineering practices.

KEY HIGHLIGHTS

Banking app shipped to multiple markets (South Africa, Philippines) with 20M+ users; ~98% crash-free (Firebase) and 4.4+ rating.

Owned Origination & Customer onboarding flow; currently own the Design System for broader adoption across feature teams and markets.

Primary code reviewer; introduced snapshot testing for the Design System, plus documentation guidelines and a playground app for faster feedback loops.

Improved team processes via workflow automation (n8n), reducing manual operational overhead.

EXPERIENCE

TymeX / GoTyme (Fintech / Banking)

Senior Android Engineer | Dec 2021 - Present | Markets: South Africa, Philippines | Team: 11

Owned the Origination & Customer domain (new customer registration/onboarding) and delivered customer-facing improvements for a large-scale banking app.

Currently own the Android Design System built with Jetpack Compose, used across feature teams and markets to improve UI consistency and development speed.

Set up snapshot testing for Compose components to prevent visual regressions and improve release confidence.

Created Design System guidelines and documentation; built a playground app for component demos, usage examples, and faster product/design alignment.

Worked on revamping a legacy partner portal into the new Tyme Bank / Tyme Kiosk experience, refactoring legacy structures toward a cleaner architecture.

Built and enhanced payment features and extensions to improve user experience.

Maintained application stability and quality through troubleshooting, production support, and continuous improvements; introduced workflow automation using n8n.

Product metrics: 20M+ users | ~98% crash-free (Firebase) | 4.4+ rating

ATMANVINA COR. (Enterprise / Warehouse Management)

Mobile Developer | May 2020 - Dec 2021 | Market: South Korea | Users: warehouse operators (2 warehouses)

Built Android apps for import/export management and warehouse operations; focused on reliability and usability for frontline workers.

Delivered solutions for cloth and leather shoe material import/export workflows using Kotlin and MVVM.

Contributed to a Flutter (GetX) project providing import/export management solutions.

THLSOFT COR. (Outsourcing)

Intern / Junior Developer | Jan 2019 - May 2020

Developed a MacOS/iOS remote viewer solution using the RDP protocol.

Built an e-commerce backend (RESTful APIs) and worked with RabbitMQ; integrated data flows between MariaDB and MongoDB.

Developed an Android application to scan and display beacon device information using Java and MVVM.

SKILLS

Android: app components, lifecycle, resources

UI: Jetpack Compose (Navigation, Paging), Design System

Architecture: MVVM, Clean Architecture

Async: Coroutines, Flow, RxJava2

DI: Hilt, Dagger2, Koin

Networking: Retrofit, OkHttp, Gson

Data: Room, DataStore

Testing: JUnit, MockK/Mockito, JaCoCo, snapshot testing

Firebase: FCM, Remote Config, App Distribution, Crashlytics

CI/CD: TeamCity

Tools: Android Studio, Gradle, Git/Gitflow, Bitbucket, Jira, LeakCanary

Languages: Kotlin, Java

SELECTED PROJECTS

Origination & Customer Onboarding (Banking) - New customer registration and customer flows

Delivered end-to-end onboarding experiences for new customers, collaborating with product, design, backend, and QA.

Focused on reliability and maintainability through Clean Architecture/MVVM patterns and production support practices.

Android Design System (Jetpack Compose) - Shared UI components for multi-team, multi-market delivery

Designed and developed reusable Compose components and patterns to standardize UI across feature teams and markets.

Added snapshot testing to prevent visual regressions; built documentation guidelines and a playground app for demos and usage examples.

Process Automation - Team workflow automation with n8n

Automated recurring operational workflows to reduce manual overhead and improve team efficiency.

EDUCATION

Ho Chi Minh City University of Natural Resources and Environment - B.S. in Information Technology (Software Engineering) (Oct 2016 - Oct 2020) | GPA: 3.06/4
